

Navigating Digital Transformation: A Pragmatic Approach to Application Modernization

Digital transformation has become a top priority for businesses worldwide as they strive to remain competitive and relevant in the digital age. While digital transformation can mean different things to different organizations, it generally refers to the process of leveraging digital technologies to create new business models, improving operational efficiency, and enhancing the customer experience. Application modernization is a key component of digital transformation, and it involves updating legacy applications to improve their performance, scalability, and security.

This article will explore a pragmatic approach to application modernization that aligns applications' priorities with business goals and objectives.
